

Mount Malindang

To start with this article I will tell you frankly that I haven't further information about this mountain. I've only seen this mountain far away, but I have some information that I've been gather from the help of the internet and also from people.

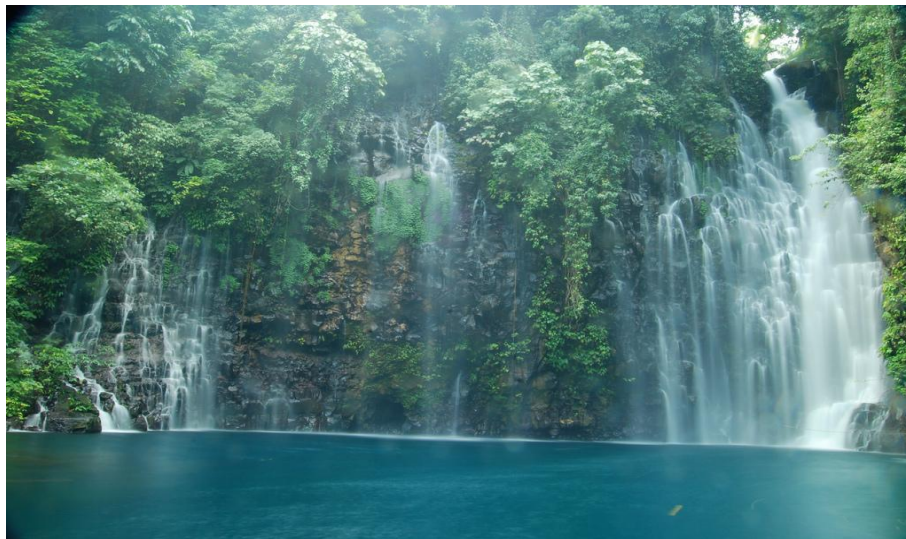

Mount Malindang is a complex volcano located in the province of Misamis Occidental. The least studied mountain range was formed through several volcanic activities. Some of which could be historical, evident by the presence of two calderas surrounded by high rock walls, two sulfurous hot springs, and a crater lake named "Lake Duminagat". The entire mountain range is dissected by several canyons and ravines making its terrain very rugged and forested slopes covered with beautiful scenery.

Mount Malindang and the whole Malindang Mountain Range alluring qualities from its waterfalls, Crater Lake and dense virgin forests which host diverse and rare species of flora and fauna.

Mount Malindang has its economic importance to everybody. Mount Malindang and its adjoining mountain range is a catchment area which drains water through 49 rivers and streams, and numerous creeks. It provides potable water for domestic, agricultural and other uses to more than one million inhabitants of Misamis Occidental and also eastern part of Zamboanga Del Norte and Zamboanga Del Sur.

This mountain is being guarded to protect trees around it. There is one of the trees there that is supported the water coming from the mountain. Illegal loggers are not allowed to go there to prevent deforestation. Cutting of trees around the mountain will be the reason to active the Mount Malindang. That`s why the Misamis Occidental province secured the safety of every citizens as well as the mountain.
